DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-5 and 7-9 rejected under 35 U.S.C. 102(b) as being clearly anticipated by Jacobson (USP 5,264,736). Jacobson discloses a driver for a switch that precharges the inductor before switching on the second switch. See figures 2 .

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Jacobson (USP 5,264,736) in view of Zhang (USP 6,441,673). Jacobson discloses the claimed invention except for having a bridge circuit for the resonant gate driver. Zhang discloses that it is known in the art to provide a bridge circuit for the resonant gate driver. It would have been obvious to one having ordinary skill in the art at the time of the invention was made to provide the bridge circuit for the resonant gate driver of Zhang with the high frequency resonant gate driver for a power MOSFET

Art Unit: 2838

of Jacobson, in order to provide a resonant gate driver circuit suitable for driving power switches in high frequency applications that recovers gate drive energy stored in the gate capacitance of the power switches, resulting in substantially lossless operation.

Response to Arguments

5. Applicant's arguments filed 9-18-07 have been fully considered but they are not persuasive. The newly claimed limitations are taught by the Jacobson reference. See column 5, lines 32-52, in which the current is flowing from the first switch 14 across inductor 18 before the switch 16 is turned on.

Conclusion

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
